

Secure Personalised ITSO Compliant Cards

Meeting the needs of the English National Concessionary Transport Scheme

Personalised ITSO Compliant Card

Payne Security and Burall InfoSmart have created a solution specifically to assist TCAs in meeting the requirements of the English National Concessionary Card Scheme. With over 30 years experience in the transport sector, we have the products and services to meet the scheme's requirements in terms of:

- Data cleansing and enhancement
- High-volume digital print technology for efficient ITSO card production
- Encoding, personalisation and fulfilment
- Printers & software for on-site ITSO card production

Features

Secure ITSO smart card print personalisation
 Short-run digital print
 ITSO compliant Mifare 1k & 4k inlays
 Secure ITSO compliant smart card base stock print option
 Integrated security print technologies
 Encoding & fulfilment bureau service

Benefits

All print & variable data is 'locked' into the card core
 High quality, unique card prints in quantities you require
 Fulfilling all your ITSO smart card application requirements
 To ensure ITSO compliance for onsite secure production
 Protecting your concessionary travel cards from fraudulent use
 Meeting all your project personalisation & mailing needs

Given timescale and volume of cards to be issued across 291 English TCAs, our volume digital card production, onsite card systems and ITSO experience will provide an efficient, timely, cost-effective, secure card production service for all TCAs card requirements.

Burall InfoSmart is a company well known in the UK transport sector, and a founder member of ITSO as the first company in the UK to have both its Perso-POST and various media certified and/or approved ITSO-compliant. Payne Security has over 30 years experience producing ID cards working with both public and private sector organisations, including over 200 local authorities within England.

By marrying these areas of expertise, Payne Security can deliver at a local level high quality, personalised, secure and durable cards which are ITSO compliant, in readiness for April 2008.

High-Volume Digital Print Service for Centralised ITSO Card Production

Using Payne Security's unique card manufacturing and digital print capability it is now possible to combine the benefits of secure personalised ID cards together with ITSO contactless smart card technology.

Our personalisation service provides secure cards to the highest quality with all the print features locked into the core of the card, ensuring durability and security.

Cards will be uniquely encoded and can be prepared for bulk despatch to the TCA or sent direct to the end user.

Data Cleansing and Enhancement

For those TCAs requiring help ensuring their data is up to date, validated and in a required format, Payne Security is able to provide a variety of services including:

- Address details (Standardisation)
- Acquiring cardholder images and form scanning
- Check for duplicate card holders
- Deceased cardholder check
- Change of address and 'Gone Aways'

Printers & Software for on-site ITSO Card Production

Built around our IDPro card management software and a high quality Magicard Prima re-transfer printer, our onsite system enables TCAs to immediately issue high quality ITSO compliant cards.

Ideal for instant issuance requirements or for follow on production after the initial project volume. All base stock is ITSO certified and the system is provided together with the ITSO encoding module and software.

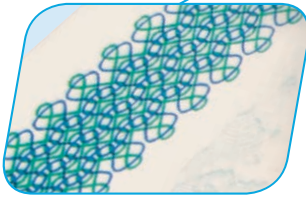

To find out more about how we can help, please contact us on **0800 970 9703** to arrange for a consultation meeting.

Secure Print Technologies

Using Payne Security's unique card manufacturing and digital print capability it is now possible to combine the benefits of secure personalised ID cards together with ITSO compliant contactless smart card technology.

Our personalisation service provides secure cards to the highest quality with all the print features locked into the core of the card, ensuring durability and security.

Guilloche & Fine Line

Based around the concept of using highly defined print lines to create complex designs that are extremely difficult to originate and print.

Microtext

Viewable under magnification, microtext print can be incorporated into the card and cannot be duplicated by dye-sublimation, inkjet or laser printers.

UV Print

UV ink technology allows the printing of images which are only visible when viewed under Ultra Violet light. A covert technology used in passports and banknotes for many years.
